configuration, IP soutes & pinging Chesvatians Eist when we connect PCs to sources See that the link is down & no messa Can be sent After combusing pc with default gates IP address we can configure the scut IP address we can configure the scut ISE configure the touters according us CLI. After configuring all the sequired interfaces we see all links are up. If we send a ping message from pco pc1 we see an error haying Destination Unspeachable.		Defout static address in souter topology -
Elast when we connect PCs to soutes. See that the link is down & no messar. Can be sent. After contiguing pc with default pater. IP address we can contiguise the south CLI. After configuring all the sequised interfaces we see all links one up. If we send a bing message from PCO pcl we see an esses traying bedination. Unseachable. This means we should add all the south south that come in between two PCs. We can check which all Natwork we connected using "show it soute" command then add the missing network in PI. Then add the missing network in PI. Then add the missing network in PI.		
Eiset when we connect PCs to surter See that the link is fown & no messar Can be sent. After configuring pc with default gater. IP address we can configure the rain cut of the sent interface we see all links are up. If we send a ping mourage from PCs pc1 we see an error training bearination undershable. This means are should add all the exist southers to scuting table of all the south that come in between two PCs. We can check which all Notwork we connected uping "show it show it saute" command then add the missing notwork in p1. In RO, R2 we give default address to		
Eiset when we connect PCs to surter See that the link is fown & no messar Can be sent. After combining pc with default gater. IP address we can configure the rain cut and the required interfaces we see all links are up. If we send a ping mourage from PCa pct we see an error bearing bearination understand. This means are should add all the exist southers to southing table of all the south that come in between two PCs. We can check which all Notwork we cannected wing "show it saute" command then add the missing notwork in property and the property and the missing notwork in property and property in property and property in property and property and property in property and property and property and property in property and prop		observations
See that the link is found a no massar Can be sent After contiguing pe with default gater. IP address we can contigue the sant Lize contigue the houters according us CLI. After configueing all the sequined interfaces we see all links are up. If we send a ping necesse from Peo Pel we see an engle browing Destination Undenchable. This means we should add all the exist southers to sawting table of all the south that come in between two Pes. We can check which all Network we connected wing "show ip saute" command then add the missing network in pro-		
After combining pe with default gaters IP address we can configure the said Lee configure the houter according us CLI. After configuring all the sequired interfaces we see all links are up. If we send a ping necesse from peo pel we see an ever boying bedination unseachable. This means we should add all the exist southers to saiding table of all the sout that come in between two pes. We can check which all Network we connected wing "show ip soute" command then add the missing network in pro		First when we connect PCs to goviter u
After combusing pe with default gates. In As then add the give default address to possess we give default address to possess when add the missing network in As.		see that the link is down & no message
In address we can contigues the south Le configue the toutess according using interfaces we see all links are up. If we send a ping message from people we see an esser training Destination. Unseachable. This means we should add all the exist southers to southing table of all the southers to southing table of all the southers to message which all Network we connected using "show ip south" commander then add the missing hotwork in producted using "show ip south" commander then add the missing hotwork in production address to the policy of t		can be sent
In address we can contigues the south Le configue the toutess according using interfaces we see all links are up. If we send a ping message from people we see an esser training Destination. Unseachable. This means we should add all the exist southers to southing table of all the southers to southing table of all the southers to message which all Network we connected using "show ip south" commander then add the missing hotwork in producted using "show ip south" commander then add the missing hotwork in production address to the policy of t		
Le configure the touters according using the sequired interfaces we see all links are up. If we send a ping message from peoper waying beginstion unspeachable. This means we should all the exist southers to southing table of all the southers that come in between two pes. We can check which all Netwerk we connected using "show ip south" command then add the missing natwork in production address to the possible of the southers and the missing natwork in productions.		
interfaces we see all links are up. If we send a fing message from PCO pcl we see an eyes bagging bestination unseachable. This means we should all the exist southers to scurting table at all the south that come in between two PCs. We can check which all Network we connected using show it saute" command then add the missing network in pr		(P address we can configure the souter
interfaces we see all links are up. If we send a fing message from PCO pcl we see an eyes beging bestination unseachable. This means we should add all the exist southers to scurting table at all the south that come in between two PCs. We can check which all Network we connected using show it saute" command then add the missing network in pr		in continue the antage conceding win
intestaces we see all links are up. If we send a ping message from PCO DCI we see an esque thaying Destination Undeachable. This means we should add all the exist southers to sawling table of all the south that come in between two PCE. We can check which all Network we connected using "show it sawle" command then add the missing network in AI Then add the missing hotwork in AI		
If we send a fing message from PCO PCI we see an esses baying Destination Unspeachable. This means we should add all the exist southers to scutting table of all the southers that come in between two PCE. We can check which all Network we connected using "show ip soute" common then add the missing network in Al		
pcl we see an estal baying bestination unseachable. This means we should add all the exist southers to susting table of all the south that come in between two PCE. We can check which all Network we connected using "show it soute" commons then add the missing network in protection and the missing		
pcl we see an essay traying Destination Unseachable: This means we should add all the exist gouters to susting table of all the sour that come in between two PCE. We can check which all Network we connected using "show it soute" commons then add the missing network in ps In RO, RS we give default address to		If use send a ping message from PCO +
This means we should add on the exist gouters to santing table of all the source that come in between two PCE. We can check which all Network we connected wing "show ip soute" common then add the missing network in principle of address to the RO, R2 we give default address to		
souters to scurting table of all the south that come in between two PCE. We can check which all Network we connected using "show it soute" command then add the missing network in AT		unspachable.
souters to scusting table of all the south that come in between two PCE. We can check which all Network we connected using "show it soute" command then add the missing network in AT		
that come in between two PCE. We can check which all Network we connected using "show it soute" command then add the missing network in AT. In RO, RZ we give default address to	11	This nears we should add all the existing
We can check which all Network we connected using "show it route" commonity then add the missing network in properties of RO, RZ we give default address to		goutes to susting table of all the soute
connected using "show it soute" commons then add the missing notwook in AI		that come in between two PCE.
connected using "show it soute" commons then add the missing notwook in AI		
then add the missing network in pr	CALL	
In RO, RZ we give default address to		
		then add the willing nationsk in by.
complete the connection.	1	n RO, R2 we give default address to
	(complete the connection.
	The state of	

of any of the connected Acs to send
a fing request to any other PCs. connected
to the sastes we also see that sometime
the sequest times out but me eventually
solved soft that noitemeters soft the
sestanted.
